HELP

Scroll down ↓

1/ CHOOSE DIFFERENT VARIATIONS

Most of items have different options, for example, you can choose device color and case separately. Also you can disable case.

When you see **[+]** sign in Layers pallete you can expand folder and choose option that you need.

2/ USING MOCKUPS

Find **Change this** layer and double click on it. New window will appear. Paste your design in new window. Close and Save it. Item will automaticaly updated
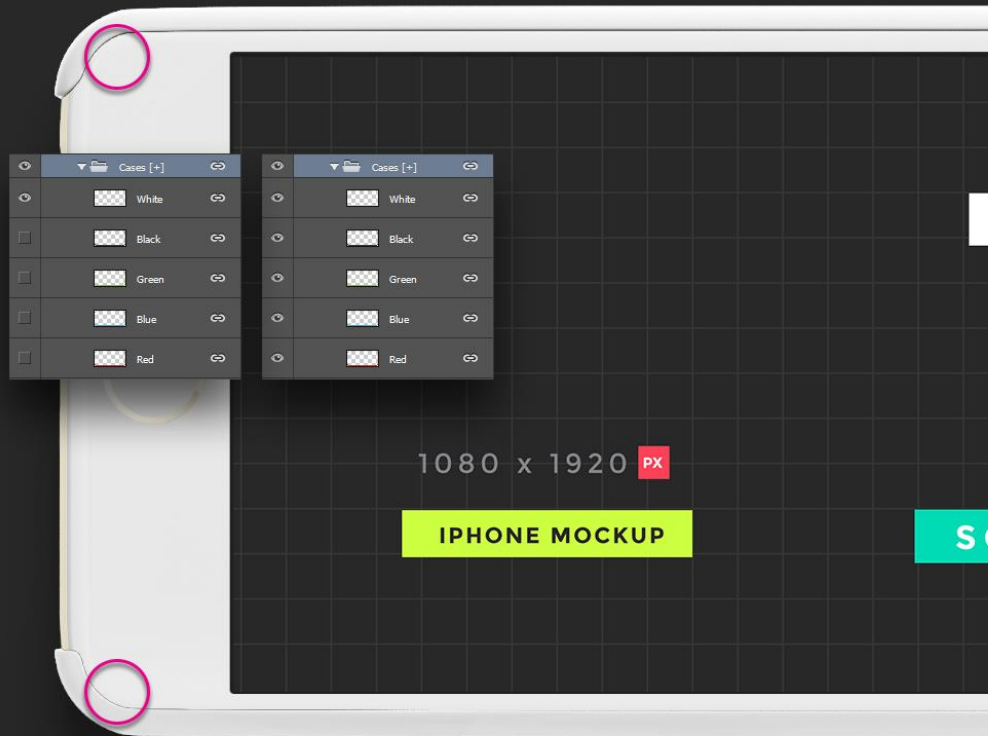

3 / USING SCENE GENERATORS

You can create your own custom compostition, using one of three scene generators. Choose Topview, Perspective or Frontview scene generators.

Select layer folder of an item that you need, and drag and drop it into your scene or design. Use different options and mockups to customize your scene

4 / USING SCENE GENERATORS

Sometimes you drag and drop item in your scenes; you can see dirty black borders. The reason of it, when you drag and drop items Photoshop may turn on all disabled layers. To fix it you just need to disable or delete all unnecessary layers and result will be much cleaner.
